HOW TO INTEGRATE MS POWER WITH RPA

ONLINE VIA TEAMS   10:30 - 12:00

Share thoughts and learnings on the power platform.

Organizations are realizing significant returns from intelligent automation, but that doesn't mean that automation teams haven't encountered crucial challenges and obstacles on their way to increasing returns, automating more complex processes, and achieving scale.

Recently, the trend of RPA migration, or switching from one RPA tool to another, has become increasingly more popular as existing RPA solutions become more mature and the MS Power Platform offers new options.

Also, within KPN we are looking at ways to make most efficient use of the existing RPA solutions and the MS Power Platform capabilities. We would like to share both our challenges and learnings of our continuing journey:
• Reduce the growing cost of ownership for automation
• Automation vs Robot Process Automation
• Development capacity
• Migration challenges

KPN is also eager to learn from other organizations which challenges they faced and how they coped with it. Therefore, it will be an interactive session.

TARGET AUDIENCE
RPA Specialists, RPA Leads, , Digital Leads, Transformation Leads, Low-code/no-code Product Owners & Product Managers, CIO, CTO

PROGRAM
10:30 – 10:45 Introduction IT Circle
10:45 – 11:15 Power Platform @ KPN
